DETAILED ACTION

- Claims 2-7, 11, 12, 15-18, 20-25, 29, 30, 33-41, 49, 51, and 53-69 are presented for examination.

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: In light of applicant's amendments and remarks, and upon further consideration, the cited prior art fails to teach or suggest the combination of elements recited in the independent claims, as a whole, which include:

For Example:

Independent claim 11:

11. A machine-implemented method comprising:
generating a color profile that conforms to a defined color profile architecture and that defines a multistage transform capable of translating an image color space to a profile connection color space;
receiving an image;
processing the image using the color profile; and
outputting the image to an electronic device; wherein the generating, the receiving, the processing and the outputting are performed by at least one processor, and wherein the image comprises a parameterized encoding of the image color space

Art Unit: 2629

with image parameters defining a range and an offset of an image component of the image, and a white point of the image color space; and

the generating the color profile comprises affecting two or more stages of the multistage transform based on the image parameters during the generating of the color profile, the affecting comprising:

determining a first processing stage of a transform-defining element of the defined color profile architecture, wherein the first processing stage comprises a multidimensional interpolation table that governs commingling of image channels and accounts for the range and the offset, and wherein the determining the first processing stage comprises making entries of the multidimensional interpolation table positive and normalizing the entries in the multidimensional interpolation table;

determining a second processing stage of the transform-defining element, wherein the second processing stage comprises one dimensional transforms and defines at least a portion of a conversion of the image color space to a chromatic adaptation color space, and wherein the determining the second processing stage comprises generating a second processing stage that denormalizes output of the first processing stage, applies a nonlinear function and scales by a scaling factor; and

determining a third processing stage of the transform-defining element, wherein the third processing stage comprises a matrix and defines a chromatic adaptation in the chromatic adaptation color space according to the white point,

and wherein the determining the third processing stage comprises generating a third processing stage that denormalizes output of the second processing stage and performs the chromatic adaptation.

2. Claims 2-7, 12, 16-18, 20-25, 30, 33-36, 38-41, and 54-69 are directly or indirectly dependent from independent claims 11, 15, 29, 37, 49, 51, and 53 which have been indicated allowable above, therefore claims 2-7, 12, 16-18, 20-25, 30, 33-36, 38-41, and 54-69 are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
